

MIDTERM EXAM

Written Part

Create a one-page website about one of Jakob Nielsen's 10 Usability Heuristics.

Your page is expected to contain an original **5 paragraph article**, written by **YOU**, where you explain the importance of a selected design heuristic. Each paragraph is expected to **contain at least 5 to 7 sentences**.

Hint: This topic has been discussed in class.

The heuristic your page is supposed to cover is defined according to the last digit of your student ID, per table below.

LAST DIGIT OF YOUR STUDENT ID	USABILITY HEURISTIC
1	Visibility of system status
2	Match between system and the real world
3	User control and freedom
4	Consistency and standards
5	Error prevention
6	Recognition rather than recall
7	Flexibility and efficiency of use
8	Aesthetic and minimalistic design
9	Recognize, diagnose, and recover from errors
0	Help and documentation

For example, a student whose student ID's last digit is 1 must write about visibility of system status.

As you implement your website, ensure you are following the good practices of UI design, per class discussions. Your website is expected to have:

- External CSS;
- A navigation bar, fixed at the top;
- At least one image that helps illustrate your article;
- All styles applied through CSS classes;
- A custom, professional-looking font sans-serif style, for all text (Hint: Google Fonts can be a good resource to find a non-native font).

When done, you must submit your solution by:

1. Uploading your website to our FTP server, under a folder called "Midterm"; and
2. Uploading all files in a zipped folder to the appropriate dropbox on E-Centennial.

Good luck!
